

LTN Schedule Changelog

Schedule 7.3.01 - 7.4.01 Changelog

Type	Component	Details (for Customers)
Improvement	YouTube PushTarget	Added possibility to select a pre-scheduled broadcast for publishing or create a new event on publish. You can now also modify the privacy status of the current broadcast. We now also support to select HLS push as publishing method for YouTube.
Bugfix	Playback	The next element after a looped sequence could have been blocked too early.
Improvement	UDP output	Improved CBR on UDP outputs.
Improvement	UI Load Time	Improved loading time of the entire UI.
Bugfix	Overlays	Overlay handling refactored and made fully functional again.
Bugfix	SRT outputs	stream-id parameter was URL encoded.
Bugfix	MPEG-TS imports	Conversion of .ts files could have failed when ".ts" was in the filename.
Bugfix	Playback	Changing contents of a sequence while it was playing back could have caused the next element to be blocked immediately.
New	Custom ID fields for library elements and report.xml	You can now add custom key-value fields to any video element in the library. These fields will also show up in the as-run-log (report.xml).
New	Media Importer	The Media Importer can now also import remote video files via providing an http download URL.
New	Dropbox as external library source	You can now connect to your Dropbox account and use your files in the external library. Simply drag and drop the files to the playlist, the server will create a copy for playback.
