LTN Schedule Changelog

Schedule 7.1.14 - 7.2.01 Changelog

Type	Component	Details (for Customers)
New	PushTargets	Added support for Brightcove as push target type. Currently supports ad-triggering via Live-API cue-points.
Bugfix	ExternalLibraries	Dragging multiple files from an external library (e.g. Amazon S3) to the playlist could lead to files being stuck "INQUEUE" and not downloading anymore.
Bugfix	Youtube PushTarget	Better handling of "unusual" API responses
Change	Youtube PushTarget	Changes for removal of default broadcast by Youtube
New	Twitch PushTarget	Twitch "Disconnect Protection" can now be triggered actively via holding down the SHIFT-key when pressing the disconnect button for push targets.
New (INTERNAL, don't publish to customers yet)	HLS PushTargets	Multi-Bitrate support for HLS (INTERNAL, don't publish to customers yet)
Bugfix	Livestream playback	Playback of the same livestream two times in a row could cause general playback issues.
Feature	Playlist editing	Adding ad-breaks in a bulk now also offers ability to define absolute times. Elements that are not long enough won't have the ad-break applied.
Bugfix	Playback	Fixed edge-case when an internal timeout could cause the playback to stall
